Buffalo Creek Watershed Project

The main goal of the Buffalo creek watershed project is to improve and restore the water quality of the Buffalo Creek back to supporting for recreational and biological use. The main focus of the project will be to implement best management practices targeted to reduce E. Coli bacteria in the watershed.

The Cass County Soil Conservation district has funding available for residents living within the Buffalo Creek Watershed who are willing to participate in the program. Cost share is based on a 60/40 match, where the 319 federal funds will account for 60% of the project cost and 40% is paid by the participant.

Cost Shared Practices Include but are not limited to:

-Septic System Replacement	-Prescribed Grazing
-Cover Crop	-Windbreak Shelterbelt Establishment
-Nutrient Management	-Portable Windbreaks
-Pasture/Hayland Planting	-Livestock Watering facilities (with associated grazing management plan)
-Riparian Buffers	-Field Buffers and Grassed Waterways

Contact Information
